

Learn Citaville Institute - Brochure

AI & Machine Learning

About the Course Program

This 12–16 week course introduces **AI and Machine Learning** concepts and applications. Through projects, you'll learn how to train machine learning models and apply them to real-world problems.

Delivery: Virtual (online coding + projects)

Certification Requirement: Passing grade in ML assignments and final project.

Career Paths: Machine Learning Engineer, AI Specialist, Data Scientist.

Program Duration: 12–16 weeks

Who Can Attend?

This program is designed for:

- Students with programming background
- Professionals wanting to transition into AI/ML
- Tech enthusiasts

Pre-requisites

- Programming experience (Python recommended)
- Basic statistics and linear algebra

Detailed Course Overview and Topics

- **Module 1: Introduction to AI & ML:** Understand the core concepts, history, and applications of artificial intelligence and machine learning.
- **Module 2: Supervised Learning:** Get hands-on with linear regression, logistic regression, decision trees, and other supervised models.
- **Module 3: Unsupervised Learning:** Explore clustering, dimensionality reduction, and other unsupervised learning techniques.
- **Module 4: Neural Networks & Deep Learning:** Get an introduction to neural networks and the foundations of deep learning.
- **Module 5: Machine Learning Projects:** Work on multiple projects to apply your skills, such as building a spam classifier or a house price predictor.
- **Module 6: Final Capstone Project:** Develop a significant project from scratch, including data collection, model building, and evaluation, to showcase your abilities.

On Completion of this Course, You'll Walk Away With:

1

Practical knowledge of ML models and AI applications

2

Hands-on coding experience with ML frameworks

3

Portfolio-ready ML project

4

Certificate from **Learn Citaville Institute**
