Big Data Fundamentals

About the Course Program

This 4-week introduction covers the core concepts, tools, and workflows in Big Data. Learn to understand data pipelines, distributed systems, and frameworks used to manage massive datasets.

Delivery: Virtual (100% online, instructor-led, project-based) — learn at your own pace

Certification Requirement: Completion of projects and minimum attendance. Earn a minimum passing grade of 70% in each Course Topic assessment

Common Career Paths: Data Engineer, Big Data Analyst, Systems Administrator.

Program Duration: 4 weeks

Recommended Study Time: Minimum of an hour personal daily study time during week days and 5 - 6 hours intensive training during weekend

Who Can Attend?

This program is designed for:

- Beginners curious about Big Data technologies

- IT professionals seeking to reskill in Big Data
- Data analysts wanting to understand large-scale data systems

Pre-requisites

- Familiarity with basic IT or databases helpful, but not required

Detailed Course Overview and Topics

- **Module 1: Introduction to Big Data:** Understand the "3 Vs" of Big Data (Volume, Velocity, Variety) and its importance.
- **Module 2: Big Data Technologies:** Get an overview of key technologies like Hadoop, Spark, and NoSQL databases.
- **Module 3: Data Processing & Storage:** Learn about data ingestion, processing, and different storage solutions for Big Data.
- **Module 4: Practical Applications:** Explore real-world case studies and applications of Big Data in various industries.

On Completion of this Course, You'll Walk Away With:

1

Clear understanding of Big Data fundamentals

2

Knowledge of major Big Data tools

3

Certificate from **Learn Citaville Institute**
