

Learn Citaville Institute - Brochure

Cloud Computing and Administration (AWS, Azure & Google)

About the Course Program

Cloud Security training equips learners with the skills to secure cloud environments and infrastructure. The course focuses on protecting cloud data, applications, and networks while ensuring compliance. Foundational cloud course covering core services across AWS, Azure and GCP, plus migration strategies and cloud deployment.

Delivery: Hands-on labs, case studies, and security simulations

Certification Requirement: Completion of projects and minimum attendance. Earn a minimum passing grade of 70% in each Course Topic assessment

Career Paths: Cloud Security Engineer, Security Analyst, Compliance Specialist, Cloud Architect

Recommended Study Time: Minimum of an hour personal daily study time during week days and 5 - 6 hours intensive training during weekend

Program Duration: 4–8 weeks

Who Can Attend?

This program is designed for:

- IT and cloud professionals
- Security specialists upgrading to cloud environments
- Students interested in cybersecurity careers

Pre-requisites

- Basic cloud computing knowledge
- Networking and security fundamentals helpful

Detailed Course Overview & Topics

- **Module 1: Introduction to Cloud Computing:** Understand cloud concepts, deployment models (public, private, hybrid), and service models (IaaS, PaaS, SaaS).
- **Module 2: AWS Fundamentals:** Learn about core AWS services, including compute (EC2, Lambda), storage (S3), and networking, with hands-on exercises in the AWS Management Console.
- **Module 3: Microsoft Azure Essentials:** Explore Azure's key services, such as virtual machines, storage solutions, and identity management, and learn to use the Azure Portal.
- **Module 4: Google Cloud Platform (GCP) Overview:** An introduction to GCP's services and how they compare to AWS and Azure.
- **Module 5: Cloud Migration Strategies:** Learn about common cloud migration methodologies like rehosting, refactoring, and re-platforming.
- **Module 6: Practical Project - Deploying a Web Application to the Cloud:** As a capstone project, you will deploy a simple web application on one or more of the cloud platforms, demonstrating your understanding of compute, storage, and networking services.

On Completion of this Course, You'll Walk Away With:

1

Proficiency in cloud security principles and practices

2

Hands-on skills with AWS, Azure, or GCP security tools

3

Preparation for advanced cloud security certifications

4

Practical experience across major cloud providers and migration awareness
