Hardware Engineering Fundamentals

About the Course Program

This course introduces learners to the principles of computer hardware engineering. It covers the assembly, maintenance, and troubleshooting of computer systems, providing practical skills for hardware management.

Delivery: Virtual (100% online, instructor-led, project-based) — learn at your own pace

Certification Requirement: Completion of projects and minimum attendance. Earn a minimum passing grade of 70% in each Course Topic assessment

Common Career Paths:

Recommended Study Time: Minimum of an hour personal daily study time during week days and 5 - 6 hours intensive training during weekend

Program Duration: 4–8 weeks

Who Can Attend?

This program is designed for:

- Aspiring hardware technicians
- Students interested in IT hardware careers
- Business professionals managing technical infrastructure

Pre-requisites

- Basic understanding of computers

Detailed Course Overview & Topics

- **Module 1: Introduction to PC Hardware:** Learn about different components of a computer, including motherboards, CPUs, power supplies, and storage devices.
- **Module 2: Troubleshooting PC Hardware:** Apply a troubleshooting methodology to diagnose and resolve common power, disk, and display issues.
- **Module 3: Mobile Devices & Laptops:** Learn how to support mobile devices, including setting up peripherals and troubleshooting hardware issues.
- **Module 4: Practical Project - Computer Assembly and Disassembly:** A hands-on lab where you will assemble and disassemble a computer.
- **Module 5: Operating System Basics:** An overview of different operating system types and features.
- **Module 6: Printer & Peripheral Support:** Learn to deploy and troubleshoot print devices.

On Completion of this Course, You'll Walk Away With:

1

Participants will gain the knowledge and skills to assemble, maintain, and troubleshoot desktop computer systems.
